***Examination of Application #10/773,261***

1. This communication is in response to the amendment received on 30-October-2006. Claims 1-20 are pending in the application. Applicant's request for a telephonic or personal interview was considered, but in view of the proposed rejection, the Examiner respectfully decided a written communication was warranted. Also, the Serial No. shown on the top of the amendment pages is 09/784,159, but is understood by the Examiner to be directed to the Serial No. of the present invention.

***Specification Objections***

2. The disclosure is objected to because of the following informalities:

Page 16      line 6      The parentheses "show (e.g." does not have a corresponding right parentheses.

***Claim Rejections under 35 U.S.C. § 101***

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

- 3.1 Claims 1-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The invention claims (claim 1 preamble), "*A computerized method for providing an optimization solution*".

**In re Application of: Parija et al.**

**3.2** This claimed subject matter lacks a practical application of a judicial exception (law of nature, abstract idea, naturally occurring article/phenomenon) since it fails to produce a useful, concrete and tangible result.

Specifically, the claimed subject matter does not produce a tangible result because the claimed subject matter fails to produce a result that is limited to having real world value rather than a result that may be interpreted to be abstract in nature as, for example, a thought, a computation, or manipulated data. More specifically, the claimed subject matter provides for: (in claim 1) *receiving* (emphasis added) *data for a process which is defined by a linear functional form, including variables y, X<sub>1</sub> and X<sub>2</sub>*;

*minimizing y with respect to X<sub>1</sub>; and;*

*maximizing y with respect to X<sub>2</sub>, wherein maximizing y comprises a global optimum for the process.*

This produced result remains in the abstract and, thus, fails to achieve the required status of having real world value, because a practical application with a tangible result is not generated for application in a real world environment, nor is it conveyed to a real world environment via display to a user or storage in a computer.

***Allowed Claims***

**4.** Claims 1-20 are deemed allowable over the prior art of record at this time, pending resolution of any rejections noted above, because the prior art does not specifically disclose the claimed method of providing an optimization solution.
